Severe abdominal pain and diarrhea after digoxin poisoning

Liu Zong  Zhu Qiang

Chinese classification: R972.1

Summary: A 59-year-old male patient was admitted to the hospital on August 31, 2003 due to abdominal pain and diarrhea. The patient had a history of digoxin treatment. On admission, the patient was pale, with tachycardia and hypotension. The diagnosis was acute digoxin toxicity. Treatment was initiated with intravenous fluid, atropine, and digoxin-specific Fab fragment. The patient's condition improved, and he was discharged on day 7. The patient was advised to follow-up with his primary care physician. This case highlights the importance of recognizing and treating acute digoxin toxicity to prevent serious complications.
